

Fiberglass Conduit System for Above Ground Applications

AtkoreTM
FRE Composites

Introduction

Atkore FRE® Composites produces the highest quality epoxy and phenolic fiberglass conduit products for worldwide installations. Having manufactured fiberglass products since 1958, FRE® Composites is focused exclusively on the design, engineering, and production of composite filament-wound fiberglass conduit products and accessories. We serve numerous markets including, electrical, telecom, water and wastewater, data centers, utilities, transportation, commercial, and industrial.

FRE® Composites Above Ground Fiberglass Conduit systems provide power, telecommunications, and transit utility companies with a reliable, easily installed solution for environmentally exposed applications. This complete line of conduit, conduit bodies, elbows, fittings, and adaptors are flame resistant, and will not rust or corrode regardless of application conditions. These non-metallic fiberglass system products are operational in temperatures ranging from -40°F to +230°F and are impermeable to a wide spectrum of chemicals and fuels.

Characteristics & Applications

Why should you consider using FRE® conduit?

Fiberglass conduit offers many advantages over other commonly used conduit, such as steel and PVC, as listed below:

Ease of Assembly

Epoxy fiberglass conduit is easy to install, partly resulting from its light weight, which facilitates handling. Fitting sections together using the push-fit spigot and bell design further facilitates assembly. Alternatively, fiberglass conduit can be joined through the application of epoxy adhesive, but this is usually not necessary. Contractors report that joining by way of FRE® Conduit push-fit TriSeal™ connections results in considerable labor savings.

Lightweight

Epoxy fiberglass conduit weighs considerably less than PVC or steel, resulting in cost savings through reduced handling time, reduced assembly time, reduced requirements for mechanized handling, reduced freight charges, reduced system weight, and lower costs of support.

Trade Size		FRE Conduit (per 100 ft)		PVC Conduit (per 100 ft)		Steel Conduit (per 100 ft)	
in	mm	lb	kg	lb	kg	lb	kg
2	53	34	15	71	32	330	150
4	103	76	34	230	104	1,000	454

Low Coefficient of Friction

The coefficient of friction of epoxy fiberglass is lower than that of steel, and considerably lower than that of PVC. This means that electrical cables are easier to pull through, resulting in labor savings, less stress on cables, and reduces the number of costly manholes. As FRE®'s minimum resin content is higher than industry standards, FRE®'s coefficient of friction is the lowest in the industry.

Temperature Range

FRE® Conduit can withstand a wide array of temperature ranging from -40°F to 230°F (-40°C to 110°C). Unlike PVC which is extremely brittle in cold temperature (+40°F) and malleable in heat, FRE® Conduit maintains its unique characteristics.

No burn-through

Unlike rigid PVC, epoxy fiberglass bends and elbows have a strong resistance to being cavitated or pierced as a result of rope pull.

Cable Fusion

Fiberglass is an excellent insulator. Unlike fiberglass conduit, steel conduit will weld with cable, and PVC conduit may fuse or melt under electrical fault conditions.

Flexible and Impact Resistant

The flexibility of epoxy fiberglass conduit allows it to conform to mildly uneven surfaces. Epoxy fiberglass conduit has tended to survive the stresses of earthquakes better than PVC or steel.

Corrosion Resistant

Epoxy fiberglass is not affected by the effects of water or most other chemicals. Contact the factory for further information, if specific information is required.

Non-Toxic

Unlike PVC, epoxy fiberglass is low halogen and does not release bromine or chlorine.

Characteristics & Applications

Why should you specify FRE[®] conduit made by FRE[®] Composites?

There are a number of reasons why FRE[®] conduit offers the industry the most for its money. Our **experience** and **quality record** speak for themselves. We live and breathe quality: quality is the number one priority to which everything else is subordinate. After more than 50 years in the business, we know how to do things right, and we know how to ensure that we keep doing them right.

Our **total production capacity** is the largest in the industry enabling us to produce large volumes of product within tight delivery deadlines, the product is available throughout Canada, the USA, and elsewhere around the world through Atkore's growing distribution network. Quality and service to the customer make us the first choice for all fiberglass conduit and fittings needs.

To ensure that your project will benefit from the highest quality conduit products, specify FRE[®] conduit:

Key Specification Points:

- Shall comply with the latest applicable UL / CSA / NEMA standards.
- Conduit shall bear UL Listing #E53373 and CSA Certification #028032S.
- Shall be manufactured from E or E-CR glass and epoxy resin with no fillers.
- Shall have a glass content of 68%, plus or minus 3%.
- All joints shall be inside tapered bell end and of even socket depth throughout the system (conduits & fittings).
- Shall be equipped with one-piece injection molded TriSeal™ push-fit integral bell and spigot.
- Multiple locations to better serve your needs.

**For more information,
please contact us : 1 888 849-9909.**

Split Conduit Assembly Instructions

Split Conduit Assembly Instructions

Immediate and instant repair

Immediate, instant, in place, permanent repair for FRE® duct system is available with our patented Split Conduit* System. FRE® Split Conduit* is pre-cut and hinged on one side to permit the replacement of damaged or faulty ducting without any interruption of service. The Split Conduit* is applied in place : then sealed with extruded H and T strips for a completely finished repair.

Additional advantages include :

- Year-round, all temperature installation
- Resistance to high humidity and temperatures
- Simplified inventory, easy storage and handling
- All fittings available: Y, elbows, dbell (except FRE® to steel, i.e. thread adapter)
- Especially suited to communication, computer, data & fiber optic ducting
- Withstands severe temperature variations
- High compressive and impact strength
- Resistance to deformation and cable fusion when shorted
- Repairable
- Heat transfer ability
- Minimum expansion and contraction
- Light weight and easy to handle
- Cuts easily with any saw

How to Install: 3 Easy Steps

Remove damaged or faulty ducting

Encapsulate cable with FRE® Split Conduit*

Seal with extruded H and T strips

FRE® Split Conduit* is pre-cut on one side and hinged on the other side (Fig. 1). A H-strip is used on the side which has the full cut and a T-strip is used on the hinged side of the conduit (Fig. 2). The Split Conduit* is installed over the cables to be protected or over broken conduit of all types. This is accomplished by separating the split side of the conduit wide enough to allow it to slide over the cable or damaged conduit. It is best to start with one end of the conduit and work towards the other end.

Split Conduit Assembly Instructions

H-strip Procedure:

Once the conduit is in place, the H-strip is installed first before the T-strip. Do not apply extruded strips over the belled end of the conduit (Fig. 3).

Fig. 3

Step 1:

Spread the conduit and insert the H-strip into position at one end. Then apply hand pressure along the « H » section forcing the small leg into the conduit (Fig. 4).

Fig. 4

Step 2:

When the section is in place, clasp the conduit on either side of the H-strip and squeeze it into the « H » until it locks. That operation should be done at every foot for full insertion (Fig. 5).

Fig. 5

Note:

On the spigot end of the conduit, the H-strip may be installed in a different manner, if desired. The H-strip can be slid down the split until it butts the H-strip previously installed. Then trim to the correct length. The strip is then locked into place by applying a clamping force to the conduit and forcing the conduit edges into the H-strip as before. For better seal, duct tape can be applied at the butt-joint of the H-strip (Fig. 6 and Fig. 7).

Fig. 6

Previously installed H-strip

Fig. 7

Cut H-strip to length
Apply duct tape on
butt-joint.

Split Conduit Assembly Instructions

T-strip procedure:

After the H-strip is in place, the T-strip is installed in the intermittent slots.

Step 1:

Position the T-strip such that one end is located at the center of one of the slots. Then apply hand pressure to force the teeth into position and slide the T-strip to the end of the slot (Fig. 1, Fig. 2 and Fig. 3).

Fig. 1

Fig. 2

Fig. 3

Step 2:

Apply hand pressure on the T-strip starting at the installed end of the slot and work towards the other end forcing the T-strip's teeth into the slot as you go. Then at the other end of the slot, cut the T-strip to the correct length. Continue this procedure for the other slots (Fig. 4 and Fig. 5).

Fig. 4

Fig. 5

Note:

To economize on T-strip material, two short sections of T-strip may be used to seal a slot instead of one continuous section. Again, duct tape can be applied at the butt-joint of the T-strip.

As a final operation (optional), to ensure system rigidity and to lock the sealing strips into position, use tie wraps or the Repair Kit (#40-0174). Tie wraps are inserted at the midpoint of each of the intermittent slots (Fig. 6)

This conduit length is now completed and work can begin on the next length. When installing subsequent conduit lengths, ensure that they are oriented properly such that a bell end and a spigot end are facing each other for every set of adjacent conduits. As subsequent conduits are completed with the installation of H & T-strips, they can be coupled in bell & spigot fashion. Since tight mechanical sealing is not possible at the bell and spigot joint, taping or additional tie wraps can be used to ensure better joint integrity.

Fig. 6

Chemical Resistance

Chemical Resistance

(Above Ground Fiberglass Conduit)

Chemical Resistance	After 45 Days	After 90 Days	Chemical Resistance	After 45 Days	After 90 Days
Sodium chloride, 10% aq. sin.	45	E	Nitric acid, 10% aq. sin.	45	E
Diesel fuel	E	E	Sodium carbonate, 10% aq. sin.	E	E
Unleaded gasoline	E	E	Benzene	NR	NR
Jet fuel	E	E	Toluene	E	E
Hydrochloric acid, 10% aq. sin.	E	E	Xylene	E	E
Sulfuric acid, 10% aq. sin.	E	E	Acetone	NR	NR

E : Excellent chemical resistance

NR : Not Recommended for long term contact.

Note : Chemical resistance tests reported here were conducted according to UL-651 section 38. Samples were immersed in the specified chemical reagent for 45 and 90 days, respectively. Weight gains or weight losses at the end of the immersion period were recorded. Mechanical integrity was determined by the parallel plate crush (ASTM D2412) test. Loads were measured at 5% deflection and at failure at the end of the immersion period and compared to the reference values of control specimens not exposed to any chemical attack. Weight gains or losses above 2% and drops in crushing resistance (load at 5% deflection or load at failure) above 15% were considered as evidence of insufficient chemical resistance.

Note: Impact resistance tests were carried out at -40°C, as required by UL 2515/CSA C22.2 2515, and at 23°C. The values reported here are the lowest of the two measurements (normally those taken at -40°C).

N/A: Not Available, please consult FRE Composites for details.

Flexural Data

Maximum flexural Modulus:	1.4E6 Psi	9 653 Mpa
Allowable working stress at 0.2% strain:	2 800 Psi	19.31 Mpa
Maximum long term flexural modulus at 0.2% strain:	1E6 Psi	6 895 Mpa
Longterm allowable design stress:	2 000 Psi	13.79 Mpa

Conduit Deflection Tables

Conduit Deflection Tables

The graphs on the following pages reflect the span-deflection characteristics of Above Ground Conduit. First, select the appropriate deflection graph. Continue by selecting the appropriate cable weight from the X-axis and move in a vertical direction, intercepting various deflection lines. At the appropriate deflection line for your application, look left the chart to find the recommended span between supports.

In order to take long-term creep into account, the charts have been tabulated using the long-term modulus in the calculations. Because of this, conduit sections will actually deflect much less than the charted value when first installed. If this long-term safety margin is not required, FRE Composites will prepare appropriate span charts for your application on request.

Pulling Tension for Cables

Pulling Tension For Cables

The cable manufacturer must be consulted for the maximum pull permitted on a selected cable. Other data such as lubrication restrictions should also be obtained from the cable manufacturer. The total pulling force required for a cable in a conduit depends upon the cable weight, length of conduit, number and location of the elbows and the coefficient of friction. The following formula is published to aid in obtaining tension values: $T_i = T_{i-1} e^{\frac{f\pi}{180}} + wL f \cos \theta + wL \sin \theta$

T_i = Tension at the point towards end of run (lbs)

θ = Elbow angle ($^\circ$)

f = Coefficient of friction

ϕ = Angle ($^\circ$) of run with regards to

- positive if run moves upwards

- negative if run moves downwards

- equal zero (0) if run is horizontal

L = Length of conduit subjected to cable weight (ft.)

e = Napirian Logarithm base = 2.718

T_{i-1} = Tension at point towards beginning of run (lbs)

w = Cable weight per foot (lbs/ft.)

Example: Parameters - $f = .25$ $w = 10$ lbs/ft. $r = 36$ inches = Elbow radius (used to calculate elbow length)

i) Pulling from point "0" to point "7"

Point (i)	θ ($^\circ$)	a ($^\circ$)	L (ft)	$e^{\frac{f\pi}{180}}$	T_i (lb)
0	-	-	-	-	0.0
1	0.0	0.0	10.0	1.00	25.00
2	0.0	45.0	3.4	1.22	38.81
3	0.0	0.0	5.0	1.00	51.31
4	0.0	45.0	3.4	1.22	70.84
5	0.0	0.0	8.0	1.00	90.84
6	0.0	90.0	5.7	1.48	148.81
7	0.0	0.0	3.0	1.00	156.31

ϕ : This value is always zero until the run is directed other than completely horizontal.

ii) Pulling from point "7" to point "0"

Point (i)	θ ($^\circ$)	a ($^\circ$)	L (ft)	$e^{\frac{f\pi}{180}}$	T_i (lb)
7	-	-	-	-	0.0
6	0.0	0.0	3.0	1.00	7.50
5	0.0	90.0	5.7	1.48	25.39
4	0.0	0.0	8.0	1.00	45.39
3	0.0	45.0	3.4	1.22	63.63
2	0.0	0.0	5.0	1.00	76.13
1	0.0	90.0	3.4	1.22	101.03
0	0.0	0.0	10.0	1.00	126.03

Elbow Angle ($^\circ$)	For $F = 0.25$	For $F = 0.35$	For $F = 0.45$	For $F = 0.55$
11.25	1.050	1.071	1.092	1.114
22.5	1.103	1.147	1.193	1.241
30	1.140	1.201	1.266	1.334
45	1.217	1.316	1.424	1.540
60	1.299	1.443	1.602	1.779
90	1.481	1.733	2.028	2.372

The following table is published to aid in solving the values for $e^{\frac{f\pi}{180}}$

Maximum Tension Allowed At Elbows:

The maximum pulling tension at an elbow must not exceed the calculated value of $300 \times r$ (Radius of the conduit elbow in feet). The above equations are used to determine what tension will occur at an elbow. This is to avoid cable damage.

* In general, it is preferred to pull in the direction which results in the lowest tension. To do this, the pay-off reel should be placed at the end nearest the elbow.

*For safe pulling tension, to avoid cable damage, consult cable manufacturers for tension per cable type.

Glossary

FRE® Conduit

Fiberglass conduit manufactured by FRE Composites. FRE is a registered trademark in Canada, United States and elsewhere in the world, and is a recognized and trusted name worldwide since the 1970's for superior quality advanced composite products.

General

RTRC

(Reinforced Thermosetting Resin Conduit)

An industry acronym for conduits that are manufactured using a mineral reinforcement such as fiberglass in a fully cured thermoset resin.

IPS (Iron Pipe Size)

Dimensional standard widely utilized in North America for both metallic (such as RMC, EMT, IMC) and Rigid Nonmetallic (RTRC, PVC and HDPE) electrical conduit. This trade size has established its Outside Diameter as the constant value.

ID (Inside Diameter)

Dimensional standard widely utilized in North America for electrical and telecommunication raceways. This trade size has established its Inside Diameter as the constant value.

Conduit

Straight section available in 9.84 ft (3m) or 19.68 ft (6m) length, and in standard diameters from $\frac{3}{4}$ " to 8" (21 to 203 mm).

Wall Thicknesses

Two (2) wall thicknesses recognized by UL/CSA/NEMA standards

Standard Wall (SW) conduit

Conduit built with a standard wall thickness that varies based on the conduit diameter and is recommended for exposed non-hazardous locations.

Heavy Wall (HW) conduit

Conduit built with a heavier wall thickness that varies based on the conduit diameter and is recommended for additional protection of exposed non-hazardous locations.

Medium wall (MW) is not a recognized wall thickness per any UL/CSA/NEMA standards.

Glossary

Key Products

Split conduit (Patented design)

Section of FRE conduit cut completely on its longitudinal axis while being hinged at 180° to the longitudinal cut. It can be opened and closed, allowing its installation over existing cables to protect them without having to remove them. The original Split conduit invention was issued to General Electric of Canada (CGE), our former parent company, under U.S. Patent 4175593 and Canadian Patent 1043277.

H strip

Thermoplastic strip utilized to seal the split side of a split conduit.

T strip

Thermoplastic strip utilized to seal the hinged side of a split conduit.

Sleeve

Oversized section (12" or 305 mm in length) of straight conduit used to repair a damage section of a conduit.

Wobble coupling

Non-watertight fitting allowing for vertical and horizontal movements ($\pm 3^\circ$) of the raceway.

Skew Wobble coupling

Non-watertight fitting allowing for vertical and horizontal movements ($\pm 7.5^\circ$) of the raceway.

O-Ring Expansion Joint

Section of conduit including a deep socket unthreaded female section and a gasketed male section of conduit. It is designed to accommodate the thermal expansion and contraction of long sections of straight conduit resulting from ambient temperature variation. This guarantees the water tightness of the joint and no dislocation of the fitting.

O-Ring Expansion/Deflection Joint

Similar to O-Ring expansion joint described above, but designed to accommodate slight vertical changes in the direction of the incoming conduit by means of a flexible neoprene sleeve located at the exit of the expansion joint.

Hangers (Intermediate or Anchored)

Corrosion protected metallic supports utilized to hang conduit raceways in above ground installations.

Key Technical Descriptions

Glass content

Weight percent of glass fiber present in the conduit, as % of total weight.

Span distance

Distance between conduit supports which varies based on the selected cable weight and conduit trade size.

Deflection

Deformation of conduit due to the weight of the cable installed inside it. Deflection is a function of the diameter and weight of the cables, and of the distance between conduit supports. Measured in inches.

Coefficient of thermal expansion

Ratio representing the change in linear dimension of a section of conduit resulting from changes in temperature (ΔT°).

Coefficient of friction

Ratio of the force tending to maintain contact between two surfaces and the force which opposes the sliding of the surfaces one along the other.
