

THE ONLY TUBE FOR YOUR CONVEYOR SYSTEM

Allied Tube & Conduit® Corporation not only manufactures tube to conveyor specifications, but we also produce our tubing from the “inside-out.” Our engineers developed a method to perform inside diameter control on our in-line of Flo-Coat® galvanized tubing, thus providing a remedy for conveyor roll applications. The end result is a better operating conveyor system with increased package handling efficiency. For extreme bearing fit requirements, I.D. flash control is also available.

Why engineer your conveyor system around a tube...when we engineer our tube for your system

Features & Benefits

- Advanced Topcoat - The clear organic topcoat seals in the protection producing a smooth, shiny appearance
- Tight O.D. and Ovality Tolerances - Provides lower TIR readings and quieter conveyor systems; allows systems to run at higher speeds
- Tighter Steel Gauge Tolerances - Provides a superior bearing fit
- Available Tube Sizes - ½"-5" O.D., including 50mm and 60mm. Inquire about our readily available conveyor tube sizes
- Fabrication - Ease and consistency with roll-grooving. Cutting services are also available for supplying pre-cut conveyor tubing to desired lengths and tighter length tolerances
