

WLR LED Linear Wrap

FEATURES & BENEFITS

1. Visual Aesthetic & Application

The WLR features durable steel construction with smooth, formed sides for safe handling, plus a frosted PMMA lens with prismatic texture. Its lamp-ready design lets users install the wattage and CCT LED T8 lamp suited to the space. This flexibility fits retail, warehouse, office, education, and low-bay applications.

2. Performance

Operating on 120-277VAC, the WLR fits standard commercial electrical systems for easy specification. As an energy-efficient alternative to fluorescent wraps, it supports LED T8 lamps up to 22W each. Shunted tombstone contacts ensure proper double-ended (DEP) wiring for safe, reliable operation.

3. Control

As a lamp-ready fixture, the WLR has no built-in driver, so lamp choice sets dimming and control options. This lets users select a T8 lamp with the specific control features their application requires. Shunted tombstone sockets support correct double-ended (DEP) wiring once a compatible lamp is installed.

4. Installation

The WLR is designed for quick, single-person surface mount installation, cutting labor time. Its tombstone (flip-up socket) rotates and locks in place to secure the lamp during setup. Lamps are not included, so installers can choose the T8 lamp wattage and CCT the job requires.

5. Certification & Listings

The WLR is cULus 1598 Listed for damp locations, verifying safety for moisture-prone spaces. RoHS Compliance confirms it meets restrictions on hazardous substances for safer use and disposal. A 5-year limited system warranty backs the fixture, excluding failures from overvoltage events.
