HOW TO USE FIXTURES IN A TRACK

All NICOR track lights have three contacts in the base that engage conductors within the track. NICOR track has one conductor for neutral, one for positive and one for ground.

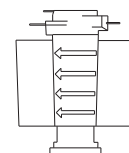

STEP 1

Identify the positive conductor on the fixture.

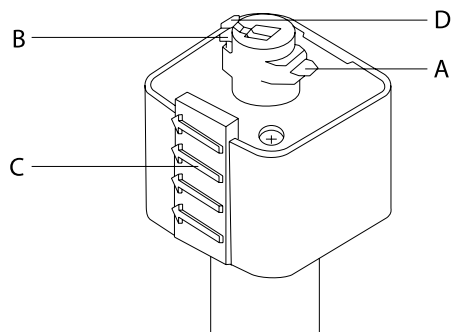

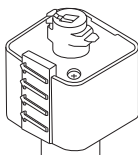

STEP 3

Release the spring-loaded positive latch with embossed polarity arrows to secure the track heads to the track.

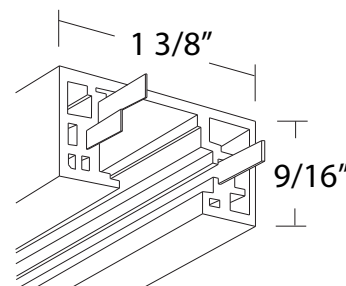

STEP 2

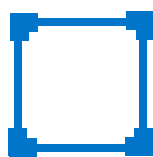

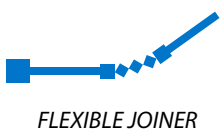

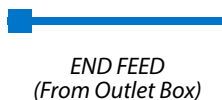

Insert into track and turn positive conductor from the track head to the positive conductor on track.

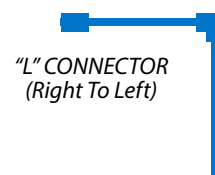

- A. Copper contacts provide the best electrical conductivity possible.
- B. True, positive electrical ground.
- C. Spring-loaded positive latch with embossed polarity arrows secures track fixtures to track.
- D. Positive (hot) conductor.
