

Chapter 13 Computer- Delivered Instruction

© 2013 Pearson Education, Inc.

Computer-delivered instruction (CDI) is a type of self-paced instruction that is delivered through a computer. It is a form of distance education that allows students to learn at their own pace and in their own environment. CDI is often used for continuing education and professional development. It can be used for a variety of subjects, including business, health care, and technical skills. CDI is often used for training in the workplace. It can be used to train employees on new products, services, or procedures. It can also be used to provide ongoing training and development for employees. CDI is a flexible and effective way to deliver instruction. It allows students to learn at their own pace and in their own environment. It is often used for continuing education and professional development. It can be used for a variety of subjects, including business, health care, and technical skills. CDI is often used for training in the workplace. It can be used to train employees on new products, services, or procedures. It can also be used to provide ongoing training and development for employees. CDI is a flexible and effective way to deliver instruction.

Advantages of
Computer-Delivered
Instruction

Flexibility
Self-paced
Learning

Disadvantages of
Computer-Delivered
Instruction

Cost
Limited
Interaction

Technical
Requirements
