BY SONANCE

NATURAL COLLECTION

DESIGNER

SOLD AS EACH

Design Your Space. Down to the Sound. The James by Sonance Natural Collection on-wall audio is handcrafted in stunning wood finishes, built to compose the look and feel of a room. Every element in a well-designed space is chosen with intention. The Natural Collection holds that same standard. Available in two performance levels and five designer-selected finishes, these on-wall speakers bring a natural wood aesthetic to any room, whether anchoring a living space, flanking a display, or adding warmth to a room that simply deserves better audio. This is not audio that disappears into the room, this is audio designed for it.

DESIGNED BY YOU, FOR YOU

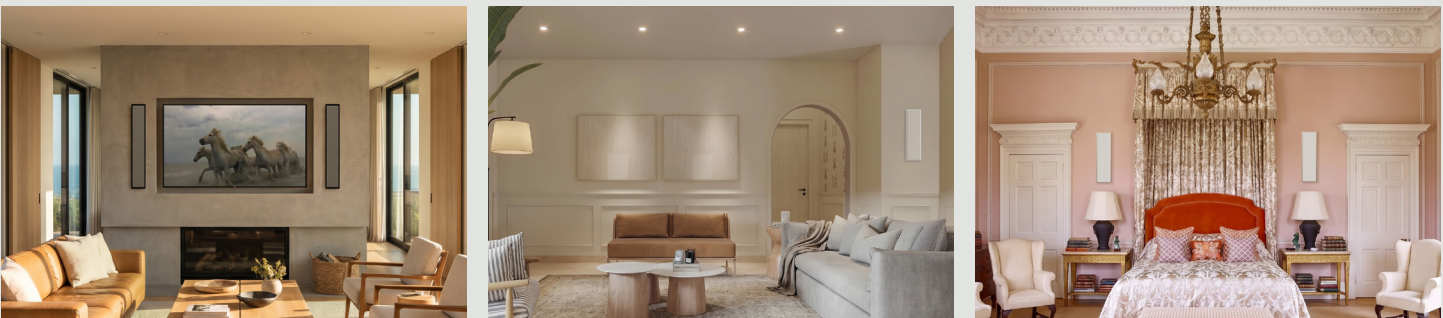

CHOOSE YOUR FORM | HORIZONTAL (HTL)

The NC3 and NC5QT HTL models create a clean horizontal presence below the display, or anywhere a low-profile horizontal speaker complements the wall. Sized to match 55", 65", 75", and 85" Samsung Frame TV 2026 display widths.

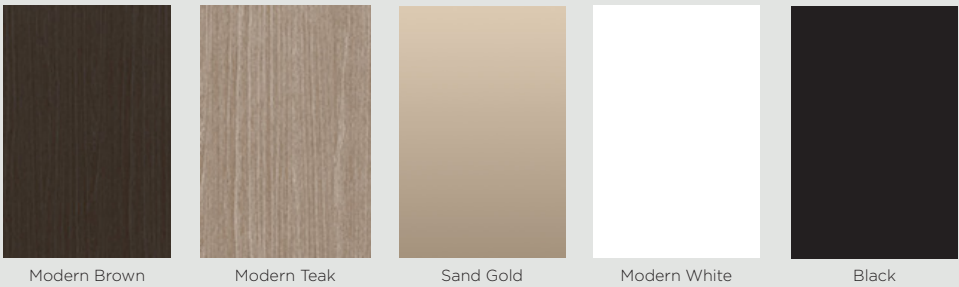

CHOOSE YOUR FORM | VERTICAL (VTL)

The NC3 and NC5QT VTL models offer a refined vertical footprint. 1-channel speakers flanking a display, framing a wall, or standing alone as a design element in any space where on-wall wood adds to the room composition. Available in minimum dimension or matched to display heights for Samsung Frame TV 55", 65", 75", and 85" 2026 models.

WOOD SPEAKER FINISHES

Five finishes. All intentional. Modern Brown and Modern Teak feature real wood veneer: genuine grain that responds to light the way only natural material can. Modern White, Black, and Sand Gold offer refined wood construction with a clean, consistent surface that holds its own in any designed environment.

FINISH WITH FABRIC

The fabric grille is the final design decision. Nine curated fabric options complement any interior palette from warm neutrals to rich textures. For rooms that call for something truly one-of-a-kind, the Designer Grille Frame lets you source and apply your own fabric on site.
