

The PRMC logo is displayed in a bold, white, sans-serif font against a dark red background. The background of the entire top section features a night-time photograph of a modern house with large windows and a central door, illuminated by warm interior lights and a small outdoor lamp.

FEATURES & BENEFITS

Design & Application

The PrimeChime Plus 2 Mini® features a compact design that fits single-gang junction boxes, saving space without sacrificing functionality. Its sleek, paintable ABS faceplate offers a modern look, while integration with video doorbell systems provides traditional chime features. Separate melodies for front and rear doors enhance convenience.

Increased ROI (Return on Investment)

Built with durable materials, the unit offers long-term savings and compatibility with video doorbell systems for added security. Customizable melodies, volume control, daisy-chaining, and energy-efficient components enhance value and reduce costs.

Environmental Friendly

The LED lighting boosts energy efficiency, while the compact design and paintable faceplate reduce material usage and waste. Durable construction ensures longevity, and compatibility with existing wiring reduces resource consumption during installation.

Installation Versatility

This doorbell system easily installs into most non-metallic single-gang junction boxes and supports lighted buttons and compatible video doorbell systems with 18ga-22ga solid wire. Each PRMC can power up to two compatible video doorbell systems and allows for daisy-chaining up to ten additional PRMC units for wider coverage in larger homes.

Flexible Control

The PrimeChime Plus 2 Mini® offers five selectable melodies, five selectable volume settings, and voice-guided setup for easy customization. Its digital control board ensures reliable performance, with distinct melodies for front & rear doors.
