

Introduction to the Project

The project aims to develop a comprehensive system for data analysis and reporting. This document outlines the key components and objectives of the project.

The system will consist of several modules, each designed to handle specific aspects of data processing and visualization. The primary goal is to provide a user-friendly interface for data exploration and reporting.

- Data Ingestion: Collecting data from various sources.
- Data Processing: Cleaning and transforming raw data into a usable format.
- Data Analysis: Applying statistical models and algorithms to the data.
- Data Visualization: Presenting the results in an intuitive and accessible manner.
