

LLR

FEATURES & BENEFITS

1. Visual Aesthetic & Application

The LLR's steel construction and powder coat finish deliver a durable, commercial-grade fixture. Its lamp-ready design lets users install the wattage and CCT LED T8 lamp suited to the space. This adaptability fits retail, warehouse, office, education, and low-bay applications.

2. Performance

Operating on 120-277VAC, the LLR fits standard commercial electrical systems for easy specification. As an energy-efficient alternative to fluorescent strips, it supports LED T8 lamps up to 22W each. Shunted tombstone contacts ensure proper double-ended (DEP) wiring for safe, reliable operation.

3. Controls

As a lamp-ready fixture, the LLR has no built-in driver, so lamp choice sets dimming and control options. This lets users select a T8 lamp with the specific control features their application requires. Shunted tombstone sockets support correct double-ended (DEP) wiring once a compatible lamp is installed.

4. Installation

The LLR is designed for quick, single-person surface mount installation, cutting labor time. Its tombstone (flip-up socket) rotates and locks in place to secure the lamp during setup. Lamps are not included, so installers can choose the T8 lamp wattage and CCT the job requires.

5. Certifications and Listings

The LLR is cULus 1598 Listed for damp locations, verifying safety for moisture-prone spaces. RoHS Compliance confirms it meets restrictions on hazardous substances for safer use and disposal. A 5-year limited system warranty backs the fixture, excluding failures from overvoltage events.
